

Triple pick up mounting ring for Jeff Moskovitz

Notes:

The above drawing should print out at actual size, which you can verify using the above dimensions.

Outer dimensions: 148mm X 95mm

Outer mounting screw dimensions: 5.250" X 3.3125". the middle two mounting screws are 3.375" and 1.185" from the right/bridge end, respectively. Sorry for mixing metric and standard.

The two humbuckers are standard Dimarzio DualSound humbuckers .

The single coil is a standard Dimarzio SDS-1. The angle from vertical is -19°

Material is stainless steel, same finish as the switch plate you are making for me. Prefer that the outer edge is rounded if possible; beveled is also OK.

The six outer mounting holes should be countersunk for standard #2 pickup mounting screws.

The actual pickup mounting/adjustment screws should not be countersunk.
