

SCALE 1/1

"Better double check before you cut. I measured from bolt center to bolt center while it was all still installed. There is the potential for things to be a bit off. The reference point is the brake master cyl holes. I couldn't think of a better more immobile datum line.

To print, just set scaling in the print box to NONE." - Toymota
 Drawing courtesy of Toymota. Measurements taken from inside the cab, but the template assumes you will remove the brake booster and pedal to align the two vertical stud holes from the engine side of the firewall before you drill the three holes for the clutch MC. If you don't do that, transfer the measurements so that the printed text faces the firewall. Probably obvious but worth stating anyway.
